NorthEast Logistics Systems, LLC

FREIGHT RAILROAD ROUTING AND ADVANCED ANALYSIS CAPABILITIES

NorthEast Logistics Systems (NELS) possesses an expansive, proprietary geo-spatial database consisting of infrastructure data layers for the North American transportation network, including population data surrounding the network. Linked with its Lane Manager™ capabilities, NELS provides authorized railroad stakeholders with detailed information about their traffic flows and route-specific operating characteristics with the goal of assisting these stakeholders with safety assessments, employee training and environmental/ risk assessments. NELS provides its Federal clients with detailed analysis of security sensitive material rail shipments so as to ensure the safe and efficient movement of these shipments throughout the nation. A key NELS differentiator is NELS real-time validation of source data through seasoned rail subject matter experts.

Our in-house staff members are highly experienced applying ESRI ArcGIS to the railroad transportation sector. We blend our rail expertise with the power of data visualization tools to meet your firm's exacting requirements.
